

PLANT HEALTH CARE FACTS

WEBWORM

Description: Adult moths are 1 to 1 1/2 inches long and their forewings are all white or white with black spots. Larvae place their tents on the tips of branches. They always feed within the web, increasing the size of it as they grow.

Host Plants: Mulberry, Walnut, Hickory, Ash, Linden, Willow, Poplar, Elm, and Fruit trees.

Damage: Feeding rarely causes tree damage. They are more of a nuisance.

Control: Insecticides can be applied when insects appear.
