Omaha NE 68106

ANNUAL TREE INSPECTION

Call Now For Your FREE Annual Tree Inspection

Our professional arborists check for signs of disease and insect activity, drought stress, rotting or decay and all other hazards. They will also determine whether your trees need pruning and fertilization. Remember, trees are alive and change over the course of a year, just like we do. The inspection results that we present to you will include a complete list of recommendations for keeping your trees healthy, or bringing them back to health if that’s needed.

Terry Hughes Tree Service has been Omaha’s leading tree care company for more than a half century. We were the first Nebraska company to earn accreditation by TCA (the Tree Care Industry Association). This is your guarantee that our advice is honest and follows the best arboricultural practices.

Call 402-558-8198 today to schedule your annual tree inspection, even if it is your first annual tree inspection.

Call 402-558-8198 today to schedule your annual tree inspection, even if it is your first annual tree inspection.

Fall & Winter Checklist

Here is a checklist of the items your trees need this time of the year.

- Prune, Trim and Thin Trees and Shrubs
- Mulch Trees & Shrubs
- Antidesiccant for Evergreens
- Plant New Trees & Shrubs
- Fertilize
- Emerald Ash Borer Preventive Treatment
- Call & Schedule Annual Tree Inspection

We Prune Trees Year Round...

Professional pruning is the best way to prepare your trees for the onslaught of winter. Tree branches are subject to winter winds and ice and snow build-up. Tree crowns form virtual walls that wind can barely penetrate, causing weak limbs to break. Ice and snow add a tremendous amount of weight to limbs, which can also cause them to break, especially if we have an early-season storm before the leaves drop.

Professional pruning prepares your trees to stand up to winter and survive. Call 402-558-8198 now to schedule your tree pruning before the winter storms.

We Can Keep Your Evergreens Green Even In Winter

Leaves turn color and drop on some trees and shrubs but they aren’t supposed to on evergreens. Be sure your evergreens don’t turn brown and drop leaves or needles this winter. Join the many property owners who depend on us to protect their evergreens with antidesiccant.

Pines and other needled evergreens aren’t the only ones that need antidesiccant. Broadleaf evergreens like rhododendrons also need this treatment.

Anti-desiccant is a wax-like material that we spray on evergreens to reduce water loss that results in winter burn.

Keep your evergreens green. Call 402-558-8198 now to schedule your treatment.

Fall/Winter Pruning

Healthy Trees Need Healthy Soil

When a tree looks sick, our Plant Health Care professionals look down as well as up to make their diagnosis. Soil plays a significant role in tree health. If soil is lacking nutrients, beneficial fungi and bacteria, it can’t nourish the tree and the tree’s health is jeopardized.

In many cases, our prescription is deep root fertilization, and the best time for deep root fertilization is the fall. Leaf loss early in the fall is one way to tell that a tree is planted in unhealthy soil. The early leaf drop will also reduce the amount of energy that the tree can produce through photosynthesis. This will contribute to a tree’s failing health, and unhealthy trees are vulnerable to insects and diseases.

When we perform deep root fertilization, we inject liquid fertilizer directly into the soil around the roots so the essential nutrients are available to the tree right away. If the soil needs an infusion of beneficial bacteria and fungi, we include them in the fertilizer formulation.

People take vitamin supplements when essential nutrients are missing from their diets. Your trees deserve the same. Call 402-558-8198 now to schedule a tree inspection.

Fall Tree Planting

Fall is a great time to plant a new tree. Call 402-558-8198 to schedule your installation.
